DIGITAL LITERACY PROJECT

Digital Literacy

Name:
TRUSHA SHIVAJI DHABE

Reg No.:
25BCE11035

Branch:
CSE (Core)

Year:
2025-26

Course Code:
CSE0001

Date:
28/03/26

Introduction

Getting selected as a Student Digital Ambassador gave me the opportunity to look at the digital world from a more responsible and practical perspective. This project is not just about completing tasks, but about understanding how we, as students, use technology in our daily academic and personal lives, and how we can do it more effectively and safely.

The main aim of this project is to create a Digital Literacy Portfolio that reflects my learning across different areas such as online safety, professional presence, communication, and awareness of cyber risks. Each task in the project focuses on a real-life skill — from designing an infographic and setting up professional profiles to writing formal emails and understanding cybercrime. All the work is organized in a GitHub repository, which itself is a new and valuable learning experience.

What makes this project interesting is that it does not require any prior technical background, yet it introduces us to tools and platforms that are actually used in real-world academic and professional settings. Overall, this project helped me become more aware of how I present myself online and how I can use digital platforms more responsibly and confidently.

Task 1: Create a Digital Literacy Awareness Infographic

Write Up:

For this task, I designed the Digital knowledge mindfulness infographic using Canva, as it provides flexible design options and is easy to navigate indeed for newcomers. The infographic highlights three important areas the introductory conception of digital knowledge, guidelines for safe internet operation, and the significance of erecting a responsible online identity. I concentrated on presenting the information in a terse and visually systematized way, using icons, headlines, and short expressions so that it can be snappily understood by scholars in a sense.

One thing I set up particularly engaging during this process was experimenting with layout and distance to make the content visually appealing without making it look cluttered. It made me realize that a good design isn't just about adding rudiments, but also about what to keep minimum. The main difficulty I faced was simplifying complex ideas into brief points while still keeping their meaning clear. Overall, this task enhanced my capability to communicate information effectively through visual design.

Task 2: Build Your Student Digital Portfolio

Write Up:

For building my student digital portfolio, I created profiles on GitHub, LinkedIn, and Kaggle, as these platforms are highly relevant for students pursuing careers in technology and data-driven fields. GitHub serves as a platform to showcase coding projects and track development work, while LinkedIn helps in building a professional identity and connecting

with peers, mentors, and recruiters. Kaggle, on the other hand, is useful for practicing data analysis, participating in competitions, and improving problem-solving skills.

On GitHub, I set up a profile README including my academic details and a brief statement about my learning goals. On LinkedIn, I updated my Education section with my current degree, institution, and expected year of graduation to establish a professional presence. Screenshots of all the created profiles have been added to the designated folder as required.

Over the next four years, I plan to regularly update my GitHub with projects, stay active on LinkedIn by engaging with relevant content, and use Kaggle to strengthen my analytical skills. This will help me gradually build a strong and credible digital portfolio.

Task 3: **Explore Coding & Collaboration Platforms**

Write Up:

I made an account on HackerRank. I finished my first coding challenge. The coding challenge was named 'Solve Me First'. I wrote a code that added two numbers together. This coding challenge was easy. It helped me understand how coding platforms work and what kinds of coding challenges are available. After finishing this coding challenge, I feel more confident. I want to practice coding more often. I made a quiz called Digital Literacy Awareness Quiz to teach people about literacy. This quiz has five questions that test a student’s knowledge of digital literacy concepts. The five questions are a mix of choice and short answer questions. When someone finishes the quiz the answers go to a

Google Sheet, so it is easy to look at the answers sort them out and make a report.

I use Google Forms and Google Sheets to collect information, conduct surveys, and organize my work. Digital Literacy Awareness Quiz and other projects will be easier, with Google Forms and Google Sheets. These tools will help me with my studies by making it easy to work with others, share information, and organize my projects. I will use Google Forms and Google Sheets to make my work easier.

Task 4: Draft a Professional Email & Etiquette Guide

Write Up:

A common example of poor digital communication can be seen when a student sends an informal or careless email to a professor, such as using inappropriate language or not clearly explaining their concern. This can create a negative impression and may even result in delays or no response. In some cases, miscommunication in group chats can also lead to confusion about assignments or deadlines, affecting the entire team's performance.

Such situations can be avoided by being mindful of tone, clarity, and professionalism in all forms of digital communication. Taking a moment to review messages before sending, using

polite language, and ensuring the information is accurate can make a significant difference. Practicing these habits helps in maintaining respect, avoiding misunderstandings, and building a responsible digital presence.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

Write Up:

While researching online safety, one thing that stood out to me was how common and sophisticated digital frauds have become, especially those related to UPI transactions. Many scams rely on simple tricks like fake links or urgent payment requests, yet they can cause serious financial loss if not identified in time. It was surprising to see how easily people can be misled through everyday platforms like messaging apps or social media.

As a result of this task, one habit I plan to change is being more cautious before clicking on any unfamiliar link or approving payment requests. Earlier, I did not always verify such details carefully, but now I understand the importance of staying alert. Developing these small but consistent habits can greatly reduce

the risk of falling victim to cybercrime and help maintain digital security.

Conclusion:

This project helped me understand the importance of digital literacy and responsible online behavior in today's connected world. Through different tasks, I learned how to present information visually, maintain a professional digital presence, and communicate effectively in online environments. Creating profiles on platforms like GitHub and LinkedIn made me realize how essential it is to build a strong and credible online identity from the beginning of my academic journey.

I also gained awareness about cyber safety, social media responsibility, and the risks associated with careless digital actions. Learning about real-life scenarios and preventive measures has made me more conscious of my online activities. Overall, this project not only improved my technical and communication skills but also encouraged me to adopt safer and more professional digital habits that will benefit me in my academic and future career growth.
